

Truly secure emails - SMX 365 + ATP

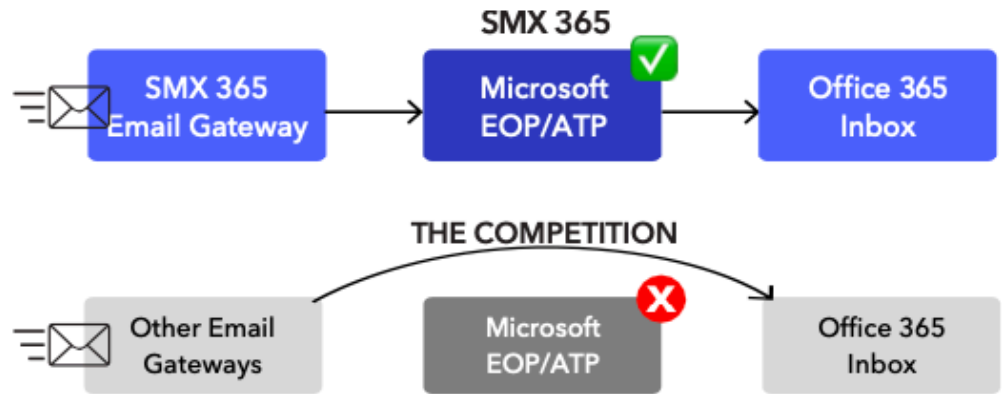

ENHANCE YOUR MICROSOFT ENTERPRISE SECURITY

SMX 365 adds the missing link to your email, by providing true dual-layer email security.

SMX 365 doesn't disable or compromise Microsoft 365's EOP or ATP security protections as other solutions do.

Instead, it amplifies and adds to them, giving more complete protection, all managed from one dashboard.

SMX 365 KEY FEATURES

Minimised false positives

A unique, highly tuned classification engine uses the latest tech to interpret security signals from proprietary and third-party feeds. This delivers advanced security while ensuring business-critical emails reach the right inboxes.

Simplify admin and reporting

Your cloud management portal makes migration and administration simple. Get easy access to reporting and make short work of managing complex workflows and rules.

Protect against impersonation attacks

Guard your board members, C-suite, senior leaders, and finance team against targeted Business Email Compromise (BEC)/spear-phishing impersonation attacks.

World-class service, local team

Our service uses signature-based, advanced heuristic threat detection and artificial intelligence/machine learning technologies tailored to the Australasian threat landscape. You also get 24/7 technical support from our knowledgeable, local service team.

ABOUT SMX

Making email safe again for over 1000 Australasian organisations

SMX is a specialist in email security. It's all we do. And that means you access expertise to make your organisation's email a lot safer, for a lot less money than our competitors. For more than 17 years, our in-house development team has been doing just that with innovative solutions using email archiving tools, a custom rules engine and carrier-grade email service management.

“ We protect around 25% of all Office 365 mailboxes in New Zealand and process 1/3 of all NZ's mail-flow* ”

Our unrivalled email security encompasses multiple layers of protection, conforms with best practice standards, and is data and workflow-driven.

This is amplified by strong partnerships with the likes of Microsoft, government agencies, M3AAWG and best-of-breed security vendors.
